HELPFUL HINTS AND TIPS

WARNING!

Refer to "Safety information" chapter.

Inner side of door

In some models on the inner side of the oven door you can find:

- the numbers of the shelf levels (selected models)
- information about the oven functions, recommended shelf levels and temperatures for typical dishes (selected models).

The temperature and baking times in the tables are guidelines only. They depend on the recipes, quality and quantity of the ingredients used.

Cooking with steam

Cookware for steam cooking

- Use only heat and corrosion resistant cookware.
- Chrome steel food containers are correct too (see special accessories).

Oven levels

- There are the correct oven levels in the table below. Count the oven levels from the bottom to the top.

General notes

- When you cook longer than 30 minutes or when you cook large quantities of food, add water if it is necessary.
- Put the food in the correct cooking containers on the shelves. Keep the distance between the shelves to let the steam get to each food.
- If you do not use the oven for a long time, remove water from the water drawer, connecting hoses and steam generator (refer to section "Cleaning and Care").

Note on the tables for Steam Cooking

- The tables give data for typical dishes.
- The temperature and time are for guidance only and depend on the composition, size, quantity of food and the cookware.
- Use almost the same recipe if you cannot find the settings for your recipe.
- Start the cooking with the cold oven if the data in the tables does not recommend differently.
- Increase the amount of water for rice to the ratio 1 : 1.5 - 1: 2 contrary to the specifications in the table.

Full Steam/Eco Steam

WARNING!

Do not open the appliance door when the function is active. Risk of burns.

The function is suitable for all types of food – fresh and frozen. You can use it for cooking, warming, defrosting, poaching, or blanching vegetables, meat, fish, pasta, rice, sweet corn, semolina and eggs.

Cooking of menus: You can prepare complete set in one go. To avoid under or over cooked dishes choose those which require similar cooking times. Use the largest amount of water specified for individual component. Put the dishes on the oven shelves in the suitable cookware. Adjust the gap between the dishes to let the steam circulate.

Sterilisation

- With this function you can sterilise containers (e.g. baby bottles).
- Put the clean containers in the middle of the shelf on the 1st level. Make sure that the opening faces down at a small angle.
- Fill the drawer with the maximum amount of water and set a time of 40 min.

Baking

General instructions

- Your new oven may bake or roast differently to the appliance you had before. Adapt your usual settings (temperature, cooking times) and shelf levels to the values in the tables.
- With longer baking times, the oven can be switched off about 10 minutes before the end of baking time, to use the residual heat.

When you use frozen food, the trays in the oven can twist during baking. When the trays get cold again, the distortion will be gone.

How to use the Baking Tables

- We recommend to use the lower temperature the first time.
- If you cannot find the settings for a special recipe, look for the one that is almost the same.

- Baking time can be extended by 10-15 minutes, if you bake cakes on more than one level.
- Cakes and pastries at different heights do not always brown equally at first. If this occurs, do not change the temperature setting. The differences equalize during the baking procedure.

Tips on baking

Baking results	Possible cause	Remedy
The cake is not browned enough underneath	Wrong oven level	Place cake lower
The cake sinks (becomes soggy, lumpy, streaky)	Oven temperature too high	Use a slightly lower setting
The cake sinks (becomes soggy, lumpy, streaky)	Baking time too short	Set a longer baking time. Baking times cannot be reduced by setting higher temperatures
The cake sinks (becomes soggy, lumpy, streaky)	Too much liquid in the mixture	Use less liquid. Pay attention to mixing times, especially if using mixing machines
Cake is too dry	Oven temperature too low	Set oven temperature higher
Cake is too dry	Baking time too long	Set a shorter baking time
Cake browns unevenly	Oven temperature too high and baking time too short	Set a lower oven temperature and a longer baking time
Cake browns unevenly	Mixture is unevenly distributed	Spread the mixture evenly on the baking tray
Cake does not cook in the baking time given	Temperature too low	Use a slightly higher oven setting

Roasting

General instructions:

- Use heat-resistant ovenware to roast (please read the instructions of the manufacturer).
- Large roasting joints can be roasted directly in the deep roasting pan or on the oven shelf above the deep roasting pan. (If present)
- Roast lean meats in a roasting tin with a lid. This will keep the meat more succulent.
- All types of meat, that can be browned or have crackling, can be roasted in the roasting tin without the lid.
- We recommend cooking meat and fish weighing 1 kg and above in the oven.
- To prevent escaping meat juices or fat from burning on to the pan, we recommend placing some liquid in the deep roasting pan.
- If required, turn the roast (after 1/2 - 2/3 of the cooking time).
- Baste large roasts and poultry with their juices several times during roasting. This will give better roasting results.
- You can switch the oven off about 10 minutes before the end of the roasting time, in order to utilise the residual heat.
